

How to bypass the Spirit in emergency situations

Temporary bypass routing feed water from the prefilters directly to the control boxes.

BEFORE YOU START

Have a dry rag at hand for wiping up water — some water will escape when tubes are disconnected.

- 1

Shut off mains, turn off the booster pump & disconnect the Spirit

Close the **feed valve** right where the mains are connected.
- 2

Disconnect the 3/8" tube at the Spirit inlet

This is the tube going from the **prefilters** to the **Spirit**.
- 3

Disconnect the tube going into the Y-connector

The **Y-connector** is the one that leads to the **control boxes**.
- 4

Connect the prefilter tubing directly into the Y-connector

The tubing from the prefilters now feeds the **Y-connector that supplies the control boxes**, bypassing the Spirit.
- 5

Turn on the booster pump and mains

Open the feed valve, switch the booster pump back on and check all connections for leaks.

WATER FLOW — SYSTEM OVERVIEW

Bypass: the Spirit sits between the Pre Filters and the Cafe Station's control boxes — steps 2–4 route the water from the Pre Filters directly into the Y-connector, skipping the Spirit.
